Senior Java Developer

Accomplished Senior Java Developer with over 20 years of extensive experience designing and developing large-scale end-to-end solutions. Demonstrated success producing all tiers of high performance applications, utilizing Java technologies and frameworks such as Spring, JavaScript, JEE, MVC and Web Services. Adept at creating UI designs for web applications with JSP, jQuery, GWT, Struts 1, 2 and Ajax. Proficient as a Web Designer, Application Developer and Architect. Strong leadership skills mentoring small to large teams of Developers in all aspects of software development. Expertise working with SQL and DB2 databases. Highly skilled at using various System Development Life Cycle (SDLC) methodologies including Agile and Test Driven Development.

Professional Experience

Company Name

1988 – Present

Job Title: See Below

Job Title: Senior Lead Java/PHP Developer

2009 – Present

- ◆ Lead development for a tracking, provisioning and financial billing system for the Managed Storage Services area. This intranet web application is written in Java and PHP, using a wide variety of open source tools, including Hibernate, Spring, JPA, Google Web Toolkit, Velocity and Smarty Templates.
- ◆ Perform requirements analysis, architecture, design, project planning and code development to help the client achieve automation of manual tasks.
- ◆ Serve in an advisory capacity, offering suggestions and improvements for creating a robust development environment, improved infrastructure design, and reducing exposures in the overall development process.
- ◆ Act as primary DBA devising DB2 and MySQL databases (both production and development).

Job Title: Senior Architect/Team Lead

2005 – 2008

- ◆ Led large intranet Java web application with over 30,000 users and approximately 15 Developers and Architects in seven countries.
- ◆ Performed hands-on architecture, allocated resources, planned projects, developed code and coordinated large, remote global Development Team.
- ◆ Organized, managed, led and provided technical expertise for the migration and consolidation from Windows servers to Linux and UNIX. This drastically reduced customer server costs.
- ◆ Led team for UI component, analyzed requirements, as well as designed and implemented user interfaces.
- ◆ Developed and implemented new functions in all areas of the application. This included web pages, command beans, and business logic, delivered development tasks on or ahead of schedule.
- ◆ Migrated/converted the Global Team to Rational Application Developer V7 from a variety of other IDEs. This generated synergy and improved Developer efficiency.

Job Title: Senior Application Architect

2003 – 2005

- ◆ Architected and designed a complex Java application, installed in multiple worldwide geographies.
- ◆ Provided guidance, leadership and technical expertise for the Programming Team. This resulted in smooth workflow throughout the development cycle.
- ◆ Recommended innovative enhancements, developed and implemented strategic goals and detailed requirements for client.
- ◆ Developed and implemented the most complex, critical areas of the application and ensured that tight schedules were met.

Job Title: Development Team Leader/Developer

1996 – 2003

Job Title: Lead Programmer/Staff Programmer

1988 – 1996
